

**Infrastructure & Technical Due Diligence advice transform the effectiveness of Infrastructure transaction and delivery.**

**This technical advisory service is for the finance community involved in the development of new telecommunications infrastructure projects or the transformation of distressed assets.**

Telecommunications infrastructure projects involve managing significant technical and commercial risk. Starting at the realisation of the need for a new infrastructure solution, or at the acquisition or disposal of existing infrastructure assets, assembling the right skill, resource, technical expertise and market knowledge will support the success of any project.

Advice on industry benchmarking, technical standards and the most appropriate infrastructure solutions is vital to measure the effectiveness of your transaction. Whether the client intends to build, buy or sell distressed assets, common-sense recommendations will make the difference.

## **Investment Funding and Infrastructure Due Diligence**

Customers increasingly rely on advisors to provide a wider scope of engineering and project

services relevant to the process of funding. Infrastructure and Technical Due Diligence advice can offer Customers, including finance institutions, the ability to assess the effect of technical and commercial factors on the value of telecommunications infrastructure projects.

## **Infrastructure and Technical Due Diligence services include:**

- Technical and commercial advice at due diligence
- Industry technical and commercial benchmarking of a project
- Technical quality assurance of telecommunications infrastructure projects
- Engineering and project advice on procuring and disposal of distressed network infrastructure assets.
